2	30-B003701S-Z0110-001	全站沉降观测点布置图 Layout of observation point of total station settlement	A	1		

注:

沉降观测点布置图

说明:
Notes:
1.本图采用巴基斯坦UTM-43N平面坐标系,EGM2008高程系统。
1.Coordinate system: Pakistan UTM-43N. Elevation system: EGM2008
2.相对平面坐标以米(m)为单位,尺寸以毫米(mm)为单位。
2.Relative coordinates system is measured in meter. Dimensions are measured in millimeters.
3.该站平均设计标高为193.40m。
3.Site level is equal to 193.40m.
4.站内道路为环区型道路,道路中心标高193.60m。
4.Interior Road is suburban type, the center level of interior road is 193.60m
5.未注明的道路宽度均为3.0米,道路的转弯半径一般均为7.0米。
5.The width of interior roads which are not indicated is 3.0m. The average turning radius of interior roads is 7.0m
6.本图建筑(A,B)坐标与UTM-43N平面坐标系关系如下所示:
6.The relationship between relative coordinate system and UTM-43N system is as below:

8 沉降观测点做法。
8 Methods of settlement observation.
8.1 沉降观测工作应在地下室底板完成后,即开始观测,施工期观测可根据施工进度及相关要求确定,竣工后,第一年内每隔2~3个月观测一次,以后每隔4~6个月观测一次。沉降停测标准可采用连续两次半年沉降量不超过2mm。
8.1 Settlement observation shall be started after completion of the basement floor, the observation can be determined according to the construction schedule and related requirements. After the final completion, the observation shall be made every 2~3 months for the first year , and shall be observed every 4~6 months afterwards. The settlement test standard can be that the settlement within six months shall not exceed 2mm for two consecutive times.
8.2 鉴于沉降观测资料连贯性的要求,严禁任意改用水准点和更改其标高。
8.2 In view of the consistency of settlement observation data, it is strictly forbidden to change the bench mark and the elevation.
8.3 ▲表示沉降观测点的平面位置,均设在柱或剪力墙上。
8.3 ▲represents the plane position of the settlement observation points, both on the column or shear wall.
9 本工程初设设计尚未最终审定,最终方案有存在调整可能,是否按图施工由总包CET决定,由此造成的变更设计不予负责。
8.3 As the preliminary design documents have not yet been approved finally, the project solution has probability to be modified. The design contractor has no responsibility for the project solution changed, if the construction contractor does not get authorized by CET before construction.
